Table of Contents

Chapter 1

An Overview: China's Energy in the Transitional Economy

Xiliang Zhang

Introduction.....	1
1. Primary Commercial Energy Production.....	1
1.1 Overview.....	1
1.2 Coal.....	3
1.3 Oil.....	3
1.4 Natural gas.....	3
1.5 Hydro-electricity.....	4
2. Primary Commercial Energy Consumption.....	5
2.1 Overview.....	5
2.2 Coal.....	9
2.3 Oil and natural gas.....	11
3. Electricity Generation and Consumption.....	14
4. New and Renewable Energy.....	18
5. Energy Intensity.....	19
6. Energy Challenges to Be Faced in the Future.....	21

Chapter 2

Coal Industry

: Development of Small Coal Mines in Market Transition and its Externality

Nobuhiro Horii

Introduction.....	23
1. Coal industry development during open and reform period.....	24
1.1 Present situation of coal industry.....	24
1.2 Deregulation in coal industry and explosive growth of small coal mines.....	27
1.3 Background of deregulation: an alternative to the reform of State coal mines.....	30

6. The prospects of the oil industry.....	85
6.1 Joining the WTO and the development of the oil industry.....	86
6.2. The development program of the western regions and the development of the oil industry.....	89

Chapter 4

Natural Gas Industry

: Evaluation of Resource Endowments and Analysis on Investment Cost

Yingyun Lu

1. Current Status of the Natural Gas Industry.....	94
1.1 Natural Gas Resources.....	94
1.2 Production of natural gas.....	105
2. The management and operational mechanism of natural gas industry and the natural gas market.....	115
2.1 The change of management organizations of natural gas industry.....	115
2.2 The construction and operation of natural gas market and the existing problems.....	119
2.3 The international cooperative market of natural gas industry.....	124
3. The pipeline transmission system of natural gas.....	125
3.1 The current pipeline transmission system of natural gas...	125
3.2 A brief introduction to the project to transmit natural gas from western regions to eastern regions.....	127
3.3 An investment cost analysis on a typical long distance natural gas pipeline – Shann-Jing pipeline.....	130
4. The analysis on the prospects of natural gas import.....	134
4.1 The necessity of natural gas import.....	134
4.2 The prospects of natural gas import through pipelines.....	135
4.3 The prospects of liquefied natural gas import.....	137
5. Prospects of the development of China's natural gas industry.....	139

Chapter 5

Power Industry

: Changes and Prospects of Power Industry That Is Transiting to Market Mechanism

Aling Zhang

- 1 . Changes of power industry since China adopted the reforming & opening up policies.....145
2. New problems occurred during the process of changes..... 149
 - 2.1 The challenges of the diversification of energy structure... 149
 - 2.2 The close attention paid to environmental problems..... 153
 - 2.3 The effects of institutional reforms on power generation cost and on the prices of electricity.....157
 - 2.4 New trends in power consumption..... 159
 - 2.5 Institutional changes of power companies and the relationship amongst the departments within the power industry..... 161
3. A power industry facing the future..... 163
 - 3.1 Changes of internal and external environments..... 163
 - 3.2 The development of clean energies..... 167

Chapter 6

Energy Supply System in Urban Area

: Case Studies in Shanghai, Tianjin and Chongqing

Deshun Liu

- Introduction..... 174
1. Present situation of urban energy supply system in the selected cities.....176
 - 1.1 Historical evolution of energy supply in the 3 cities.....176
 - 1.2 Coal dominated energy supply mix.....177
 - 1.3 Energy supply per capita and energy efficiency..... 179
 - 1.4 Energy price..... 180

2. Key issues of the urban energy supply system	
related to the sustainable development.....	182
2.1 Low energy efficiency and out-of-date energy equipment.	182
2.2 Serious environmental pollution from energy systems.....	183
2.3 Institutional structure reforming in energy sector	
toward market economy.....	184
2.4 Energy pricing system.....	186
2.5 Energy supply security.....	190
3. Efficient energy technology options.....	190
3.1 Energy efficiency and pollution control in SME.....	191
3.2 Energy Recovery from Urban Biomass Waste.....	193
4. Barriers hindering the marketing of clean and efficient	
energy technologies.....	196
4.1 Institutional aspect.....	196
4.2 Lack of marketing intensives.....	197
4.3 Weak public awareness and extensive pattern	
of economic growth.....	197
4.4 Lower energy price system with less external cost	
internalized.....	197
4.5 Financial system aspect.....	198
4.6 Capacity building in human resource aspect.....	198
5. Policy and regulations to promote the clean and	
efficient energy supply.....	198
5.1 Energy price reform.....	199
5.2 Subsidies.....	199
5.3 Regulations.....	201
5.4 Environmental control law.....	202
5.5 Energy conservation law.....	204
Conclusion.....	205

Chapter 7

Future prospects

: The tendency of China's energy supply structure in the 21st century

Shuhua Gu

1. The energy problem faced by the social economic development.....	207
1.1 The energy consumption volume is growing rapidly, however the energy utilization level is low.....	207
1.2 The limited fossil fuel resources and the uncertain energy supply.....	209
1.3 The coal-centered energy supply structure is facing severe challenges for the sustainable development..	209
1.4 The limited supply of commercial energy in rural areas also caused ecological environmental changes.....	210
2. The strategic objectives of energy development.....	210
2.1 Energy demand and supply relationship underwent material changes under the influences of the market economy.....	210
2.2 The internationalization of energy strategies and the security of energy supply system.....	211
2.3 Environmental protection is the main factor affecting the sustainable development strategies....	211
2.4 The selection of sustainable development strategies that are realizable in China.....	212
3. Projections on the energy demand.....	212
3.1 The primary scenario analysis on projecting the energy demand	213
3.2 Main conclusions from above analysis.....	218
4. Analysis on improving the energy supply structure.....	218
4.1 The strategic selection of China's energy supply structure.....	218
4.2 The analysis of energy supply structure in the future.....	220
5. The optimization of energy structure and the alleviation of greenhouse gas emission.....	228
Conclusions.....	231

Contributors

- Aling ZHANG
(Chapter 5) Professor, Institute for Techno-Economic and Energy System Analysis (ITEESA),
Tsinghua University
- Changming LI
(Chapter 3) Researcher, Institute of Industrial Economics,
Chinese Academy of Social Sciences
- Deshun LIU
(Chapter 6) Deputy Director, Global Climate Change Institute,
Tsinghua University
- Nobuhiro HORII
(Chapter 2) Visiting Research Fellow, Institute for Techno-
Economic and Energy System Analysis (ITEESA),
Tsinghua University
Research Fellow, Institute of Developing Economies
(IDE-JETRO)
- Shuhua GU
(Chapter 7) Professor, Institute for Techno-Economic and
Energy System Analysis (ITEESA),
Tsinghua University
- Xiliang ZHANG
(Chapter 1) Associate Professor, Institute for Techno-Economic
and Energy System Analysis (ITEESA),
Tsinghua University
- Yingyun LU
(Chapter 4) Deputy Director, Energy Environment Economy
Research Institute (3E Reserch Institute), Tsinghua
University
