ACKNOWLEDGEMENT

This is the FIRST of a series of publications of the Joint Research Project between Institute of Developing Economies (IDE), JETRO, and Myanmar scholars and entrepreneurs. At the same time, this book is the 60th publication of the Joint Studies on Economic Development Policies in ASEAN and neighboring countries, which have been conducted by IDE since 1988. Myanmar finally made its debut in this series.

A wide disparity in figures and numbers apparently surfaced from our sampling and data collection. These would merely indicate the unusual circumstances that would have to be encountered to conduct research in Myanmar in general and especially on policy matters. The editor would like to express his sincere appreciation to all the contributors, who had strive to compile their research findings under such systemic constraints and circumstances.

We have made numerous field surveys to verify and ascertain the accuracy and relevance of our fieldwork, which involved participation from all our contributors. These field surveys were made possible with the kind cooperation of Myanmar Industries Association under the Union of Myanmar Federation of Chambers of Commerce and Industry and the authorities concerned of various industrial zones. Although all their names could not be enumerated here, the editor would like to thank all those people who have kindly consented to our interviews and for their valuable time.

Our research has thrown new light on the latest issues confronting Myanmar's economy. Needless to say, however, each contributor is solely responsible for the findings and conclusions contained in these chapters. Furthermore, the views and interpretations of the facts and figures expressed in this publication is purely academic and may not represent the organizations he or she belongs to.
