

## Preface

The technological innovation in wet-rice growing that formed the nucleus of Indonesia's agrarian-rural development program beginning in the late 1960s finally realized domestic self-sufficiency in rice production in the mid-1980s. However, this technological innovation was not successful in solving employment problems plaguing Indonesia's rural society. Thus, it was hoped that development and growth of the nonfarm sector in rural Indonesia, in particular rural industrialization, would provide employment for increasing labor forces of production, especially women and villagers of low socioeconomic status, and as a result improve income distribution in the rural areas. In recent years, moreover, terms of trade for rice have deteriorated, in part due to cuts in various rice-growing subsidies accompanying the achievement of rice-production self-sufficiency. As a result, the development of the rural nonfarm sector has come to assume a crucial role in any plan for dealing with low income problems among villagers, including cultivators and farmers.

The purpose of this volume of research is to analyze a survey carried out in the Majalaya region of Bandung District, West Java on the development of its rural weaving industry. The focus of the study will be the growth of the nonfarm sector in the region—especially rural industrialization—in an attempt to investigate the possibilities of the development of weaving enterprises into a viable rural industry based on the idea of community-based industries. In Chapter 1, the problems underlying the research and the methodology chosen will be discussed in detail. Chapter 2 presents an outline of the village surveyed and the role it plays in the rural economy of West Java. Chapter 3 will lay down the historical background to the weaving industry in Indonesia in general and the survey village in particular, in relation to that country's policies concerning small-scale manufacturing. Chapter 4 is an attempt to describe the response of the survey village's cloth-weaving enterprises to changes in government policy enacted during the Suharto administration and changing industrial

structure, in addition to detailing the structural changes that occurred in the production area centering around the survey village and analyzing management patterns of local weavers and traders. In Chapter 5 the land-ownership patterns and side businesses of weavers and cloth traders will be taken up, in order to show the necessity of the extremely small scale of operations being carried on by cloth weavers. Chapter 6 will investigate the growth and development of rural cloth weaving in relation to local land productivity, then discuss the relationship between the development of part-time farming and the rural weaving industry. Then, after a discussion of the influence exerted on the survey village's income distribution and the allocation of its forces of production by the rural weaving industry and other nonfarm activities, a number of conclusions will be offered.

This volume is based on my doctoral dissertation submitted to the Department of Agricultural and Forestry Economics, Kyoto University in September 1993. I am deeply indebted to Honorary Professor Hiroyuki Nishimura of Kyoto University for his constant encouragement during the dissertation writing. Deep thanks are offered to Professor Sajogyo of Bogor Agricultural University, then head of Center for Development Studies, who encouraged me during my research in Indonesia during 1984–86. I owe special thanks to him for his help in obtaining a research permit and his valuable advice. I would like to express my deep appreciation to the Indonesian Institute of Science (Lembaga Ilmu Pengetahuan Indonesia—LIPI) which gave me permission to do field research in Indonesia.

Mr. Gunawan Wiradi of Agro-Economic Survey (SAE) and Ms. Winati Wigna of Bogor Agricultural University deserve special gratitude for their kind assistance during my field work. Special thanks are due to Dr. Benjamin White, Institute of Social Studies, and then the leader of the research project entitled the Rural Non-Farm Sector in West Java during 1987–1991. I was able to join the project and receive much scholarly stimulation. My deep thanks are also directed to Professor Hasan Poerbo of the Bandung Institute of Technology and Mr. Agrar Sudrajat and Ms. Indrasari Tjandraningsih of the then Bandung Office of Institute of Social Studies.

I would like to express my sincere thanks to Professor Hiroyoshi Kano, University of Tokyo, Dr. Tsutomu Takigawa of Nihon University, Professor Hiromitsu Umehara of Rikkyo University and the late Professor Kenzo Horii who have encouraged and guided me academically since I joined the Institute of Developing Economies in 1978.

No words can express my deep thanks to the then Bapak Lurah of Ciluluk Village, Mr. Dudu Rifandi and all the villagers there. Their unfailing politeness and patience in answering detailed questions and explaining village life made this study possible. Also to Ms. Janthi Wirajanthini who supported me kindly as field assistant, I would like to express my deep gratitude. My grateful thanks are also due to the English Editorial Division of the Institute of Developing Economies.

Finally I would like to thank my wife, Ami Aminah Meutia, my son Yugy, and my daughter Aisya for their enduring support throughout the duration of this study.
