

GRT₃₂(IDE) およびアジア研統一国コード表

GRT₃₂(IDE)

and

Table of IDE Standardized Country Codes

表 1 - 1 GRT₃₂ で使用されている分類コードとそれに対応する詳細分類コード

Table 1-1 Individual Classification Codes Used in GRT₃₂ and Corresponding Detailed Classification Codes

The corresponding code tables of commodity classifications SITC·R3 and SITC·R2 are based on correlations taken from the UN Statistical Division's "Standard International Trade Classification Revision 3" (Statistical Papers Series M no. 34/Rev 3, United Nations 1986). GRT₃₂ is based on these correlation codes, which are composed of uncut correlations.

GRT₃₂ is comprised of 5,245 correlations based on several combinations of 2,654 individual classification codes from SITC·R3 and 1,831 individual classification codes from SITC·R2. The commodity classifications are four- or five-digit codes defined as fine classification codes and taken (for SITC·R2) from the commodity classification tables of "Commodity Indexes for the Standard International Trade Classification, Revision 2 (Statistical Papers Series M no. 38/Rev, Vol. I. United Nations 1981), and (for SITC·R3) from the aforementioned "Standard International Trade Classification Revision 3." Only when no five-digit code exists is a four-digit code used.

In contrast, because basic model GRT₃₂ uses two types of individual classification codes for SITC·R2 (four- and five-digit codes) and three for SITC·R3 (three-, four-, and five-digit codes), the high-order digits of a fine classification code, rather than the entire classification code itself, is sometimes used in cases of codes of less than five digits.

Table 1-1 shows individual classification codes (that are not fine classifications) used in GRT₃₂ and the corresponding fine classification codes. Many are four digits, but some are three digits. SITC·R3 has two 3-digit individual codes: 746 and 747.

Because not all classification codes used in basic model GRT₃₂ are fine classification codes, there is a problem with agreement between these codes and the fine classification codes of SITC·R3 and SITC·R2 used in commodity classification tables.

The commodity classification tables of SITC·R3 contain all codes, including high-order conceptual

codes; as a number of records, they total 4,194, of which the four- or five-digit fine classification codes number 3,121. GRT₃₂ consists of 5,245 correlations, of which 2,654 are codes that do not overlap with those of SITC·R3. As mentioned earlier, these encompass 203 high-order codes. If replaced with 670 fine classification codes, the new number is 3,121 codes, the same as the number of fine classification codes in commodity classification tables.

The commodity classification tables of SITC·R2 encompass 2,257 codes (including the high-order conceptual codes). If the four- and five-digit fine classification codes are subtracted, the new number is 1,831. Replacing the two high-order conceptual codes in this number with three fine classification codes results in 1,832 codes, the same as the number of fine classification codes in the commodity classification tables.

	03427	hake, frozen
	03428	other fish, frozen
	03429	livers and roes, frozen
0371		fish prepared, preserved nes
	03711	salmon, whole or in pieces
	03712	herrings, sardines
	03713	tuna, skipjack, whole, pieces
	03714	mackerel, whole or in pieces
	03715	other fish, whole or in pieces
	03716	other fish, prepared, presrved
	03717	caviar and its substitutes
0471		cereal flours
	04711	maize flour
	04719	other cereal flour
0472		cereal groats, meal and pellet
	04721	groats and meal of maize
	04722	groats, meal of other cereals
	04729	cereal pellets excl wheat
0542		leguminous vegetables dry
	05422	chickpeas
	05423	beans excl broad, horse beans
	05424	lentils
	05425	broad beans and horse beans
	05429	other leguminous vegetables
0561		vegetables, dried
	05611	potatoes, prepred, preserved
	05612	onions, prepared or preserved
	05613	mushrooms, truffles, prepared
	05619	other vegetables, prepared
0615		molasses
	06151	cane molasses
	06159	beet sugar molasses
0622		sugar confectionery
	06221	chewing gum
	06229	other sugar confectionery
0711		coffee, not roast
	07111	coffee, not roast, not decafen
	07112	coffee, not roast, decaffein
	07113	coffee husks and skins
0723		cocoa paste
	07231	cocoa paste, not defatted
	07232	cocoa paste, defatted
0741		tea
	07411	green tea in packing <3kg
	07412	other green tea
	07413	black tea in packing <3kg
	07414	other black tea
0815		starch manufact, etc residues
	08151	starch manufacture residues
	08152	beet-pulp, bagasse
	08153	brewing or distilling dregs
2221		groundnuts
	22211	groundnuts, in shell
	22212	groundnuts, shelled
2461		wood in chips or particles
	24611	coniferous wood in chips

S I T C · R 3		
code in GRT ₃₂ (IDE)	detail code	commodity name
	24615	non-coniferous wood in chips
2481		railway, tramway sleepers
	24811	railway sleeper, not impregnate
	24819	other railway sleeper
2511		waste paper and paperboard
	25111	waste of unbleach kraft paper
	25112	waste of chemical pulp paper
	25113	waste of mechanical pulp paper
	25119	waste of other paper
2514		chem wood pulp, excl dissolving
	25141	chem wood pulp, conifer
	25142	chem wood pulp, non-conifer
2515		chem wood pulp, bleached
	25151	chem pulp, bleached, conifer
	25152	chem pulp, bleached, non-conif
2633		cotton waste
	26331	yarn waste
	26332	garnetted stock
	26339	other cotton waste
2652		true hemp
	26521	true hemp, raw or retted
	26529	true hemp, other
2654		sisal, fibres of genus agave
	26541	sisal, fibres of agave, raw
	26549	fibres of genus agave, other
2655		abaca
	26551	abaca, raw
	26559	abaca, other
2657		coconut fibres
	26571	coconut fibres, raw
	26579	coconut fibres, other
2681		wool, greasy, fleece-washed
	26811	shorn wool
	26819	other greasy wool
2682		other wool, not combed
	26821	degreased wool, not carbonized
	26829	wool, carbonized
2733		sand excl metal-bearing sands
	27331	silica sands and quartz sands
	27339	other sands
2741		sulphur of all kinds
	27411	crude or unrefined sulphur
	27419	other sulphur
2771		industrial diamond
	27711	industrial diamond, unworked
	27719	industrial diamond, oth worked
2822		waste and scrap of alloy steel
	28221	waste of stainless steel
	28229	waste of other alloy steel
2832		copper mattes, cement copper
	28321	copper mattes
	28322	cement copper
2842		nickel mattes, nickel sinters
	28421	nickel mattes
	28422	nickel oxide sinters
2878		ores, conc of molybdenum etc

S I T C · R 3		
code in GRT ₃₂ (IDE)	detail code	commodity name
	28781	molybdenum ores, conc, roasted
	28782	molybdenum ore, conc, not roasted
	28783	titanium ores, concentrates
	28784	zirconium ores, concentrates
	28785	ores, conc of niobium, etc
2891		precious metal ores, concent
	28911	silver ores and concentrates
	28919	other precious metal ore, concent
2892		precious metal excl gold, scrap
	28921	waste and scrap of platinum
	28929	waste of precious metal, nes
2922		lac, natural gums, resins
	29221	lac
	29222	gum arabic
	29229	other natural gums, resins
2923		vegetable plating materials
	29231	bamboos
	29232	rattans
	29239	other plaiting veget materials
2924		plants used in pharmacy etc
	29242	liquorice roots
	29242	ginseng roots
	29249	other plants used in pharmacy
2925		seeds and spores for sowing
	29251	sugar beet seed
	29252	seeds of forage plants
	29253	seeds of herbaceous plants
	29254	other vegetable seeds
	29259	seeds, fruit and spores, nes
3212		other coal
	32121	bituminous coal
	32122	other coal
5123		cyclic alcohols, derivatives
	51231	cyclanic alcohols, derivatives
	51235	aromatic cyclic alcohols
5139		carboxylic acid added oxygen
	51391	lactic acid, citric acid
	51392	other carboxylic acid
	51393	salicylic acid and its salts
	51394	carboxylic acids with phenol
	51395	carboxylic acids with aldehyde
	51396	carboxylic acid with oxygen nes
5145		amine-function compounds
	51451	acyclic monoamines, derivativs
	51452	acyclic polyamines, derivativs
	51453	cyclanic mono- or polyamines
	51454	aromatic monoamines, derivativs
	51455	aromatic polyamines, derivativs
5146		oxygen-function amino-compound
	51461	amino-alcohols
	51462	amino-naphthols, amino-phenols
	51463	amino-aldehydes, amino-ketones
	51464	lysine and its esters, salts
	51465	amino-acids, nes
	51467	amino-alcohol-phenol, etc
5147		carboxamide-function compound

表 1 - 2 GRT₃₂(IDE)
Table 1-2 GRT₃₂(IDE)

Grouping is the process whereby closed correlations are created by associating the correlations between classification codes A and B (which represent different systems) in the correlation code table, which here is assumed to exist.

1. Types of Groups

Individual groups thus created can be classified into four different types of correlations:

(1) Type 1 is a one-to-one correlation in which one code in classification A correlates to one in classification B; in the group, there is one connection for each code in A and B. As this is a closed correlation of one code, the number of classification codes included in the group is one.

(2) Type 2 is a correlation in which one code in classification A correlates to two or more codes in classification B. Thus, in the group of correlations, one code in classification A has a number of connections equivalent to the number of correlating codes in classification B, while multiple codes in classification B have only one connection each. In short, the number of codes in the group is equal to the number of codes in classification B.

(3) In type 3, one code in classification B correlates to multiple codes in classification A. These correlations are a collection of converters in which multiple codes in classification A possess one connection each, while a single code in classification B has a number of connections that is equal to the number of correlating codes in class A. The number of codes in a group is equal in the number of codes in classification A.

(4) Type 4 represents correlations in which multiple codes in classification A correspond to multiple codes in classification B. In short, a collection of correlations other than types (1) and (3).

In type 4 correlations between classifications A and B in a single group, the total frequency of classification A codes in the group is equivalent to the

total frequency of classification B. Type 4 is further divided into types 4a and 4b (see "note"). The number of classification codes in a group is equal to the number of codes generated from grouping.

2. Cutting and Subgroups

Let us assume that two groups of disparate properties are connected by one correlation in a group of type 4. Here, we will use the approach that removing the correlation connecting two groups results in the formation of separate, individual groups: When a correlation is removed from a group and the group composed of the remaining correlations divides into two, the group is said to have been cut, and the correlation removed is referred to as the cut element.

A group thus created is called a subgroup, which can also be divided into four types.

Address i of a group is expressed as G_i , and a collection of cut elements as C_i . If subgroups are created by grouping $G_i - C_i$ (created by removing cut elements from the group), and n subgroups are defined as $SG_i(j) \ j=1 \dots n$, then group G_i is divided thus:

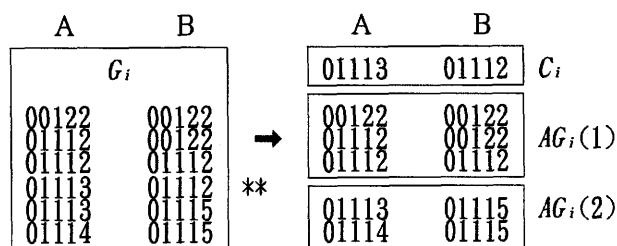

$$G_i = \{ SG_i(1) \cup \dots \cup SG_i(n) \cup C_i \}$$

The illustration below is an example of the relationship between the subgroups and cut elements of a group when $n=2$. C_i is created by removing from group G_i , as cut elements, the connections of correlations A:01113 and B:01112 (indicated with **).

Again grouping $G_i - C_i$ (created by removing the broken line of cut elements from G_i) results in two subgroups, $AG_i(1)$ and $AG_i(2)$.

As subgroups are created by re-grouping the correlation code table created by removing cut elements from the group, the content and quantity of subgroups are determined by the method of cutting. Thus, cutting can be thought of as a model of the grouping of correlation code tables.

figure 1 Relationship between group and subgroups

3. How to Interpret $GRT_{32}(IDE)$

GRT_{32} is a basic model for commodity classifications (without cutting); $GRT_{32}(IDE)$ is a cutting model independently created by the Institute of Developing Economies (IDE). Table 1-2 shows $GRT_{32}(IDE)$, which contains both the cut elements and subgroups of a single group.

Below are the symbols of each item of $GRT_{32}(IDE)$ and what they represent.

- G Consecutive number of group
- SG Consecutive number of subgroup
- SG-T Type of subgroup
- R3-F Frequency of SITC·R3
- R3-NM Name of SITC·R3
- R3 SITC·R3
- R2 SITC·R2
- R2-F Frequency of SITC·R2
- R2-NM Name of SITC·R2

Cut elements are correlations in a group whose consecutive subgroup number (SG) is represented with a zero; SG-T is left blank. For a correlation that is a cut element, the number of the subgroup to which the SITC·R2 classification code belongs is indicated

at R2-F; the number of the subgroup to which the SITC·R3 classification code belongs is indicated at R3-F.

Subgroups are collections of correlations within a group and are indicated with consecutive numbers. R2-F indicates the frequency of SITC·R2, that is, the number of connections. This is the same with R3-F.

Let us express $GRT_{32}(IDE)$ using the example of group 777. The group used in this example is comprised of two cut elements and three subgroups. Classifications A and B are respectively replaced with SITC·R2 and SITC·R3, and the consecutive number of the group is 777. Hence, G is 777, and SG is 0 for cut element C_{777} , 1 for $AG_{777}(1)$, 2 for $AG_{777}(2)$, 3 for $AG_{777}(3)$. SG-T is left blank for cut elements; is 3 for the subgroup with a continuous number (SG) of one (as the type is 3), 1 for the subgroup with a continuous number of two (as the type is 1), 1 for the subgroup with a continuous number of three (as the type is 1).

As cut element R3:77521 belongs to $AG_{777}(2)$ within the subgroup, R3-F is 2, the same as the consecutive subgroup number (SG) of $AG_{777}(2)$. Similarly, cut element R2:74141 belongs to $AG_{777}(1)$ within the subgroup, and so R2-F is 1, the same as the consecutive subgroup number (SG) of $AG_{777}(1)$.

As subgroups are created by grouping $G_{777}-C_{777}$ (created by removing cut elements from the group), R2-F and R3-F represent the numbers of connections that are valid only within the subgroups. While R3:77521 is included in the cut elements, as the number of connections within $AG_{777}(2)$ is one, R3-F for R3:77521 is also one. The foregoing can be summarized for $GRT_{32}(IDE)$ in table 1. When no cut elements exist in a group, the group is not divided into

table 1 An example of group: G_{777}

G	SG	SG-T	R3-F	R3-NM	R3	R2	R2-F	R2-NM
777	0		2	household type refrigerators	77521	74141	1	non-domestic refrigerators, nes
777	0		3	household type deep-freezers	77522	74141	1	non-domestic refrigerators, nes
777	1	3	1	non-domestic refrigerators, nes	74143	74141	2	non-domestic refrigerators, nes
777	1	3	1	other refrigerators equip	74145	74141	2	non-domestic refrigerators, nes
777	2	1	1	household type refrigerators	77521	77521	1	domestic refrigerators
777	3	1	1	household type deep-freezers	77522	77522	1	household type deep-freezers

subgroups, and so SG is always 1.

The commodity classification names in R2-NM and R3-NM have been condensed to 30 spaces. For further details, refer to the commodity classification tables mentioned in section 3. When viewing the correlations in these tables between group names (G) only, note that these correlations do not incorporate cutting, and so are the same as those of GRT_{32} in the basic model.

(note)

In order to allocate statistical quantities to correlations in cases in which one individual classi-

fication code correlates to multiple classification codes, these statistical quantities can be weighted and distributed among multiple correlations. This is called distribution weighting. While an explanation is not given here, type 4 can be divided into type 4a; whose distributed weight has a unique solution with an algebraic equation; and type 4b, which does not have a unique solution.

表 2-2 アジ研統一国コード推移表

Table 2-2 Table of Changes in IDE Standardized Country Codes

1. 表の見方

アジア経済研究所の所有する世界貿易統計データベース (A I D X T) の中で使用されている国および関税地域 (以下「国」という) の分離・統合等の変遷を具体的に表したのがアジ研統一国コード推移表である。この表によって、A I D X T を構成する UN、OECD、台湾の各統計作成機関の国コードとともに国際比較が可能ないように作成されたアジ研統一国コードを相互に参照することができる。

1-1 国名の表記方法

アジ研統一国コード推移表 (以下「表」という) における国および関税地域の名称とコードの表記は原則として以下の通りとする。

(1) 原則として国名と島名のみを取り上げた。地域 (アジア、ヨーロッパ等) については、データベースの対象としておらず、アジ研統一国コード (以下「IDEコード」という) を対応させていない。また、「その他の地域」(OCEANIA NES, MIDDLE EAST NES 等) は、そこに含まれる島・国等の変動が激しく、たいへん複雑になるため、この表に含めることは今回は見送った。

ただし、アラブ首長国連邦については、OECD の国コードも使用したため「その他の…」が含まれている。OECD の国コードでは、1970年から1975年までの6年間以外は「アラブ首長国連邦」としての国コードは存在せず、「ABU DHABI」、「DUBAI」、「RAS/AL KHAIMAH」、「OTHER U.A.E.」に分かれているもので、この場合、「OTHER U.A.E.」を除いてしまえば「アラブ首長国連邦」としての正しいデータがとれなくなるからである。

(2) 1994年現在の国名を使用している。

(3) 各国領土については、島名等の後に以下を付加した。

1. How to Interpret Table

The Table of Changes in IDE Standardized Country Codes is a table of specific changes (such as division and unification) in the countries and tariff regions (hereinafter simply "countries") used in AIDXT, the IDE's database of world trade statistics. This table makes it possible to cross-reference the country codes used by the statistical organizations of the UN, OECD and Taiwan (which comprise AIDXT) with the IDE standardized country codes, which were created to permit international comparisons.

1-1 Notational Conventions for Country Names

The notational conventions used for the names of countries and tariff regions in the Table of Changes in IDE Standardized Country Codes (hereinafter "the Table") are outlined below.

(1) Only country names and island names are used. The names of regions (e.g., Asia and Europe) are not used in the database, and are not correlated with IDE standardized country codes (hereinafter "IDE codes"). Also, "Other Regions" (e.g., OCEANIA NES, MIDDLE EAST NES) have not been included in the Table this time because of the great complexity that would result from the frequent changes in the islands and countries in these regions.

However, the category "Other" is included for the United Arab Emirates, as OECD country codes were also used. This is because except for the six-year period from 1970 through 1975, the "United Arab Emirates" did not exist as a single country code in the OECD country codes, but was instead divided into "Abu Dhabi," "Dubai," "Ras/Al Khaimah," and "Other U.A.E." Consequently, eliminating "Other U.A.E." would distort data for the United Arab Emirates.

(2) Country names as of 1994 are used.

(3) The following notations are added to the name of islands, etc., to indicate possession.

(BR)	英領
(AM)	米領
(FR)	仏領
(NETH)	オランダ領
(POR)	ポルトガル領
(NZ)	ニュージーランド領
(AUST)	オーストラリア領
(DENM)	デンマーク領

(4) 国名等の後の (A)、(B)、(C) は、一つの国等でありながら複数の IDE コードを持つ場合に使用した。UN オリジナルコードに対応する IDE コードと、OECD オリジナルコードに対応する IDE コードが異なる様な場合である。コードについては次の「国コードの表記方法」を参照すること。

1-2 データソースおよび国コードの表記方法

データの出所である統計作成機関（データソース）は以下のように表記する。

OECD(R)	OECD オリジナル旧コード (報告国としてのみ使用)
UN(O)	UN オリジナル旧コード
UN(N)	UN オリジナル新コード
TWN	台湾オリジナルコード
IDE	アジア統一コード

国コードはデータソースの表記された行に沿って表される。国コードは各機関が使用しているコードをそのまま表記する。

1-3 継続して使用している国コードの表記方法

初めて使用された年と最後に使用された年にコードを記入し、その間を破線をつないでいる。これは、左コードから右コードまでの期間、そのコードを継続して使用していることを示している。

1-4 台湾のデータについて

1963年から1970年までの「UN」と記入されている期間は、UNからデータを入手しているため、UNコードを使用していることを示している。

1971年から1981年までの「N」と記入されている期間は、UNからの入手が不可能となったため、海

(BR)	British possession
(AM)	American possession
(FR)	French possession
(NETH)	Dutch possession
(POR)	Portuguese possession
(NZ)	New Zealand possession
(AUST)	Australian possession
(DENM)	Denmark possession

(4) The letters (A), (B), and (C) appearing after a country name, etc., indicate that although the entity is a single country, it has multiple IDE codes. Sometimes an IDE code corresponding to a UN original code differs from the IDE code that corresponds to the OECD original code. Refer to the section "Notational Conventions for Country Codes" below.

1-2 Notational Conventions for Data Sources and Country Codes

Statistical organizations used as sources of data are indicated as shown below.

OECD(R)	Old OECD original code (only for reporting countries)
UN(O)	Old UN original code
UN(N)	New UN original code
TWN	Taiwan original code
IDE	IDE standardized code

Country codes are indicated along the line on which the data source appears. Country codes appear as they are used by the source organizations.

1-3 Notational Conventions for Country Codes Used Uninterruptedly

A code is entered in the first and most recent year it was used, with the two years connected with a broken line. This indicates that the code has been used uninterruptedly in the period between the left and right years.

1-4 Taiwanese Data

The notation "UN" for the years between 1963 and 1970 indicates that UN codes are used because the data was obtained from the UN.

The notation "N" for the years between 1971 and 1981 indicates that as data was not available from the

關總稅務司署統計處 (Statistical Department, Inspectorate General of Customs, Taipei, Republic of China) の発行する「中國進出口貿易統計年刊 (臺灣區) (The Trade of China, Taiwan District) からアジ研が直接入力したものである。この出版物には国コードは使用されていないため、国名を I D E コードと対応させデータベースを作成した。

1982年データからは、Statistical Department, Inspectorate General of Customs から磁気テープの形で直接入手している。

2. AIDXTの問題点

2-1 BERMUDA (BR)

1962年から1963年までのUNデータのうち新コードのものは、データベースに反映されていないことがわかった。

2-2 BHUTAN

(1) OECD、UN、及び台湾データに対応する I D E コードがそれぞれ異なっている。OECDと台湾に対応するものは別のコードではあるが、BHUTAN 固有のコードである。しかし、UNに対応するものは「OTHER ASIA NES」のコードになっている。このままでは正確な情報がとれないため、UNについては1991年データより I D E コードを「137590」に統一することとした。また、台湾については1978年データより「137590」になっている。

(2) 1962年から1969年までのUNデータは、データベースに反映されていないことがわかった。

2-3 CONGO (BRAZZAVILLE)

1976年から1982年のOECDデータに対応する I D E コード「536380」は、本来「EQUATORIAL CUSTOMS UNION」及び「EQUATORIAL AFRICA」のコードである。(ただし単国でないため、この表にはいれていない。) CONGO の1976年からのUNオリジナルコードは「4490」であるが、それに対応する I D E コードは1962年から使用している「536480」でなければならない。

UN, the IDE took data directly from "The Trade of China, Taiwan District" (published by the Statistical Department, Inspectorate General of Customs, Taipei, Republic of China). As no country codes are used in this publication, the database was creating by correlating country names with IDE codes.

Since 1982, data have been directly taken from magnetic tape obtained from the Statistical Department, Inspectorate General of Customs.

2. Problems of AIDXT

2-1 BERMUDA (BR)

It has been determined that the database does not reflect new codes in UN data from 1962 and 1963.

2-2 BHUTAN

(1) IDE codes corresponding to those of the OECD, UN and Taiwan are all different. Those corresponding to the codes of the OECD and Taiwan are separate codes, but are exclusive codes for Bhutan. Moreover, the code corresponding to that of the UN is the code for "OTHER ASIA NES." As accurate data would be unobtainable without modification, the standardized IDE code 137590 has been used for the UN since 1991. For Taiwan, 137590 has been used since 1978.

(2) It has been determined that the database does not reflect UN data from 1962 to 1969.

2-3 CONGO (BRAZZAVILLE)

The IDE code for OECD data from 1976 to 1982 (536380) was originally the code for "EQUATORIAL CUSTOMS UNION" and "EQUATORIAL AFRICA" (This has not been included in the Table as it does not represent a single nation.)

While the Congo's UN original code since 1976 has been 4490, the corresponding IDE code must be 536480, which has been used since 1962.

2-4 FAEROE IS.

OECDに対応するIDEコードと、UNに対応するIDEコードとが異なっている。加えて、UNに対応するIDEコードは「WEST EUROPE NES」であり、このままでは正確な情報は得られないと思われる。

2-5 GREENLAND (DENM)

(1) OECD及び台湾に対応するIDEコードと、UNに対応するIDEコードとが異なっている。OECD及び台湾に対応するIDEコードは「218850」で、デンマーク領であるところからヨーロッパのコードを付けたものと思われる。また、UNに対応するIDEコードは「398841」で、「OTHER AMERICA」のコードである。このままでは正確な情報が得られないのはもちろんであるが、報告国として扱う場合にはOECD対応のIDEコードを使用し、相手国として扱う場合にはその報告国によって異なるため、UN対応のIDEコードとOECD対応のIDEコードを足し上げて使用しなければならないという不都合が起きている。

(2) 1962年のUNデータのうち新コードのものは、データベースに反映されていない。

2-6 GUATEMALA

1962年のUNデータのうち新コードのものは、データベースに反映されていない。

2-7 KIRIBATI

UNに対応するIDEコードと、台湾に対応するIDEコードとが異なっている。加えて、UNと台湾の一時期に対応するIDEコード「669340」は、「OTHER SOUTH OCEANIA」のコードであって、KIRIBATI固有のものではない。このままでは正確な情報が得られないため、1992年受入れデータより「669350」に統一している。

2-8 MARTINIQUE (FR)

1962年のUNデータのうち旧コードのものは、データベースに反映されていない。

2-4 FAEROE IS.

The IDE code corresponding to that of the OECD differs from that of the UN. Moreover, the latter is "WEST EUROPE NES," which would seem to make accurate data unobtainable without modification.

2-5 GREENLAND (DENM)

(1) The IDE code corresponding to those of the OECD and Taiwan differs from that of the UN. The former is 218850, suggesting that the code for Europe was added to it to reflect Greenland's status as Danish territory, while the latter is 398841, the code for "OTHER AMERICA." Not only does this make accurate data unobtainable, but because the IDE code corresponding to that of the OECD is used when viewing Greenland as a reporting country, and its code as a trading partner depends on the reporting country, this creates the inconvenience of having to harmonize the IDE codes for the UN and the OECD.

(2) It has been determined that the database does not reflect UN data for the new code in 1962.

2-6 GUATEMALA

It has been determined that the database does not reflect UN data for the new code in 1962.

2-7 KIRIBATI

IDE codes corresponding to those of the UN and Taiwan differ. Moreover, the IDE corresponding to those of the UN and Taiwan for a certain period (669340) is the code for "OTHER SOUTH OCEANIA," not an exclusive code for KIRIBATI. As this made accurate data unobtainable, the standardized code 669350 has been used for data from 1992 and onward.

2-8 MARTINIQUE (FR)

It has been determined that the database does not reflect UN data for the old code in 1962.

2-9 NAMIBIA

UNではこの国のオリジナルコードを「16516」と設定しているが、磁気テープのデータを調査した結果、まったく含まれていない。

2-10 NAURU

OECD及び台湾に対応するIDEコードと、UNに対応するIDEコードとが異なっている。加えて、UNに対応するIDEコード「669580」は、「OCEANIA NES」のコードであって、NAURU固有のものではない。このままでは正確な情報が得られないため、1991年データより「669540」に統一している。

2-11 NEW CALEDONIA (FR)

OECDに対応するIDEコードと、UNに対応するIDEコードとが異なっている。加えて、UNに対応するIDEコード「649570」は、「FR OCEANIA」のコードであって、NEW CALEDONIA固有のものではなかった。このままでは正確な情報が得られないため、1991年データより「649570」に統一し、これを「NEW CALEDONIA」とした。

2-12 PHILIPPINES

1962年のUNデータのうち新コードのものは、データベースに反映されていない。

2-13 RYUKYU

UNデータでは、1973年以降はこの国のコードをまったく見ることができないので、RYUKYU固有のIDEコードも使用されることはない。しかし、台湾データにおいては現在も使用されており、IDEコードもRYUKYU固有のものが使われている。正確な日本の情報を得るためには、IDEコードを日本「117310」とすべきである。

2-14 SIKKIM

IDEコード「198340」は、「OTHER ASIA NES」のコードであって、SIKKIM固有のものではない。

2-9 NAMIBIA

Although the UN has designated this country's original code as 16516, in the magnetic tape there was no data whatsoever for this code.

2-10 NAURU

The IDE code corresponding to those of the OECD and Taiwan differs from that of the UN. In addition, the latter (669580) is a code for "OCEANIA NES," not an exclusive code for NAURU. As this would make accurate data unobtainable, the standardized code 669540 has been used for data from 1991 and onward.

2-11 NEW CALEDONIA (FR)

The IDE code corresponding to that of the OECD differs from that of the UN. In addition, the IDE code corresponding to that of the UN (649570) is the code for "FR OCEANIA," not an exclusive code for New Caledonia. As this would make accurate data unobtainable, the standardized code 649570 (designated as "NEW CALEDONIA") has been used for data from 1991 and onward.

2-12 PHILIPPINES

It has been determined that the database does not reflect UN data for the new code in 1962.

2-13 RYUKYU

As this country's code is completely absent from UN data for the years 1973 and onward, the exclusive IDE code for RYUKYU is never used. Nevertheless, it continues to be used in Taiwanese data, and so the exclusive IDE code for RYUKYU is also used. To obtain accurate data on Japan, used the IDE code for JAPAN (117310).

2-14 SIKKIM

The IDE code 198340 is the code for "OTHER ASIA NES," not an exclusive code for SIKKIM.

2-15 SOLOMON IS.

OECDに対応するIDEコードと、UNに対応するIDEコードとが異なっている。台湾に対応するIDEコードは、アジア研で入力していた時期のうち1971年から1977年まではUNに対応するコードを使用しているが、1978年以降はOECDに対応するIDEコードを使用している。ただし、実際に入力すべきデータがあったのは、1981年のみである。加えて、UNに対応するIDEコード「669340」は、「OTHER SOUTH OCEANIA」のコードであって、SOLOMON IS. 固有のものではなかった。このままでは正確な情報が得られないため、1992年受入れデータより「669530」に統一した。

2-16 VENEZUELA

1969年までは3機関ともに対応するIDEコードは「433360」であったのに、OECD対応は1970年から、台湾対応は1971年から「433340」に変更している。なぜこのようなこととなったのか、今となっては不明であるが、報告国として扱う場合にはUN対応のIDEコードを使用し、相手国として扱う場合には、その報告国によって異なるため、UN対応のIDEコードとOECD対応のIDEコードを足し上げて使用しなければならないという不都合が起きている。

2-17 ZANZ/PEMBA

1962年のUNデータのうち新コードのものは、データベースに反映されていない。

2-18 「その他の地域」のIDEコードを使用している国、島、地域は右側の英文の通りである。

2-15 SOLOMON IS.

The IDE code corresponding to that of the OECD differs from that of the UN. The latter was used as the IDE code corresponding to that of Taiwan for the years 1971 to 1977 (part of the period during which data was input at the IDE), but since 1978 the IDE code corresponding to that of the OECD has been used. Moreover, the IDE code corresponding to that of the UN (669340) is the code for "OTHER SOUTH OCEANIA," not an exclusive code for the Solomon Islands. As this would make accurate data unobtainable, the standardized code 669530 has been used for data from 1992 and onward.

2-16 VENEZUELA

Although all three institutions used the code 433360 until 1969, the OECD and Taiwan changed to the code 433340 in 1970 and 1971, respectively. While the reasons for this remain unclear, because the IDE code corresponding to that of the UN is used when viewing Venezuela as a reporting country, and its code as a trading partner depends on the reporting country, this creates the inconvenience of having to harmonize the IDE codes corresponding to those of the UN and the OECD.

2-17 ZANZ/PEMBA

It has been determined that the database does not reflect UN data for the new code in 1962.

2-18 Countries, Islands and Regions for which the IDE Code "OTHER REGIONS" Is Used

OTHER ARABIA(155280)	
DUBAI	1976~1992

TOKELAU(NZ)	1964~1992

2-19 台湾データに対応する I D Eコードについて

1971年から1977年の間のみ、異なった I D Eコードとなっているものがある (BHUTAN, KIRIBATI 等)。これは、台湾-I D Eコードマスターの誤入力等が原因であるが、それに気づいた時点で遡って修正している。ただし、1971年から1977年まではオリジナルデータが無いので修正することができなかった。

2-20 UNオリジナル新旧コードの重複について

UNデータは各国のUNへの報告がまちまちのため、全部の国のデータを年単位で購入できるわけではない。新たに報告されたデータがあれば、遡って購入することも希ではない。そのため、報告国としてのコードは旧コードであっても、遡って購入した国の相手国としては新コードを使用している、という状態が発生することとなる。

2-19 IDE Codes Corresponding to Those Used in Taiwanese Data

Some data for the years 1971 to 1977 (only) have a code that differs from the IDE code due to an input error in the Taiwan/IDE command master. Although past data was corrected at the time this error was detected, data for the years 1971 to 1977 could not be corrected because of the lack of original data.

2-20 Overlapping Between Old and New UN Original Codes

Because countries are inconsistent in reporting to the UN, data for all countries cannot be purchased on a yearly basis. In fact, it is not unusual to purchase old data when it is first reported. In such cases, the new code is used as the trading partner code of the country from which this past data was purchased, even though the country's code as a reporting nation is the old code.
